

# User Personas (KRYSTAL)

Here are the detailed profiles of the three main users of the KRYSTAL platform: the Model, the Influencer, and the Business.

## 1. User Persona: The Model

Name: Sofía Rodriguez

Role: Photography and Runway Model

Age: 24 years old

Location: Mexico City, Mexico

Bio:

Sofía is an aspiring model seeking opportunities in commercial photography and runway shows. She has a high-quality photo portfolio but lacks a unified system to showcase it and metrics to prove her value to brands. She spends a lot of time looking for castings and feels insecure about the quality and reliability of the offers she finds. She has no access to professional advice to improve her presentation or negotiate contracts.

Goals and Objectives:

- Secure consistent and well-paid contracts in the fashion world.
- Receive AI suggestions to optimize her visual portfolio and stand out in searches.
- Get advice on her rates and personal brand management as a model.
- Connect her Instagram so brands can see her reach and lifestyle.

Frustrations:

- Casting processes are slow, opaque, and not always secure.
- She doesn't have a tool that analyzes the quality of her portfolio and suggests improvements.

- The lack of concrete data makes it difficult to negotiate rates with companies.
- It's hard to stand out in a saturated market without representation.

How KRYSTAL Helps Her:

- AI Portfolio Analysis: KRYSTAL's AI (using models like CLIP ) analyzes her photos and provides suggestions to improve her visual portfolio.
- Social Media Integration: She connects her social profiles to display key metrics like followers and engagement in a verified manner.
- Project Matching: The platform automatically matches her with high-quality projects from brands that value visual quality and align with her style.

## 2. User Persona: The Influencer

Name: David Vargas

Role: Lifestyle Influencer and Content Creator

Age: 28 years old

Location: Bogotá, Colombia

Bio:

David is a lifestyle influencer who focuses on travel, technology, and fashion. He has built a strong community on Instagram and YouTube. His main challenge is monetizing his influence in a consistent and professional way. He spends a lot of time creating manual "media kits" and dealing with disorganized collaboration requests. He wants to work with reputable brands but finds it difficult to present his metrics convincingly and automatically.

Goals and Objectives:

- Monetize his influence stably through brand collaborations.
- Showcase verified social media metrics (reach, engagement, demographics).
- Find branded content projects that resonate with his audience and personal brand.
- Centralize all communication and contracts on a single platform.

#### Frustrations:

- The lack of a dynamic "media kit" that automatically updates his metrics.
- Brands often don't understand his value beyond the follower count.
- Negotiation with brands can be chaotic and lack a clear process.
- The time he dedicates to administration takes away from his time to create content.

#### How KRYSTAL Helps Him:

- Automatic Metrics Dashboard: KRYSTAL connects to his social networks and creates a dashboard with real-time metrics (followers, engagement, reach, etc.).
- Dynamic Portfolio Generation: The platform uses GPT-4 to create a portfolio of past projects and provides suggestions on how to present himself.
- Niche Matching: The system matches him with projects from brands looking for his specific audience niche.

### 3. User Persona: The Business

Name: Marcos González

Role: Creative Director at "Creative Digital Agency"

Age: 38 years old

Location: Los Angeles, CA

Bio:

Marcos needs to find talent (models and influencers) for fashion, tech, and beauty brand campaigns. His biggest headaches are project ideation and the talent search process. He would like an AI to help him generate innovative campaign ideas and, based on those ideas, directly present him with the models and influencers who best fit. His team spends a lot of time on administrative tasks, and he wants a system that makes everything more efficient, from ideation to management.

Goals and Objectives:

- Generate creative campaign project ideas with AI support.
- Find models and influencers whose metrics and portfolios semantically match the project's needs.
- Optimize the time his team spends on administrative tasks, using AI for project lifecycle management.
- Access concrete data (like the "match score") to make objective hiring decisions.

#### Frustrations:

- Creative block when starting a new project.
- The talent search process is very slow and manual.
- Traditional agencies have limited reach, missing opportunities with emerging talent.
- The lack of data and metrics for making objective decisions.
- Fragmented communication and the difficulty of organizing contracts and payments.

#### How KRYSTAL Helps Him:

- AI Project Generation: The platform uses GPT-4 to propose project ideas, improvement suggestions, and campaign options.
- Intelligent Matching (Semantic Search): With the project description, the AI performs a semantic search ( text-embedding-ada-002 ) and presents the most relevant talents (models or influencers).
- Unified Dashboard: He can view all candidates, communicate with them, and manage the project from a single place, all backed by AI information.
